Attack Path Intelligence Platform

Enterprise Security Assessment Report

Organization : Demo Enterprise

Analyst : Arihant

Version : 2.0

Security Classification : CONFIDENTIAL

Generated : 29 June 2026 21:27

Table of Contents

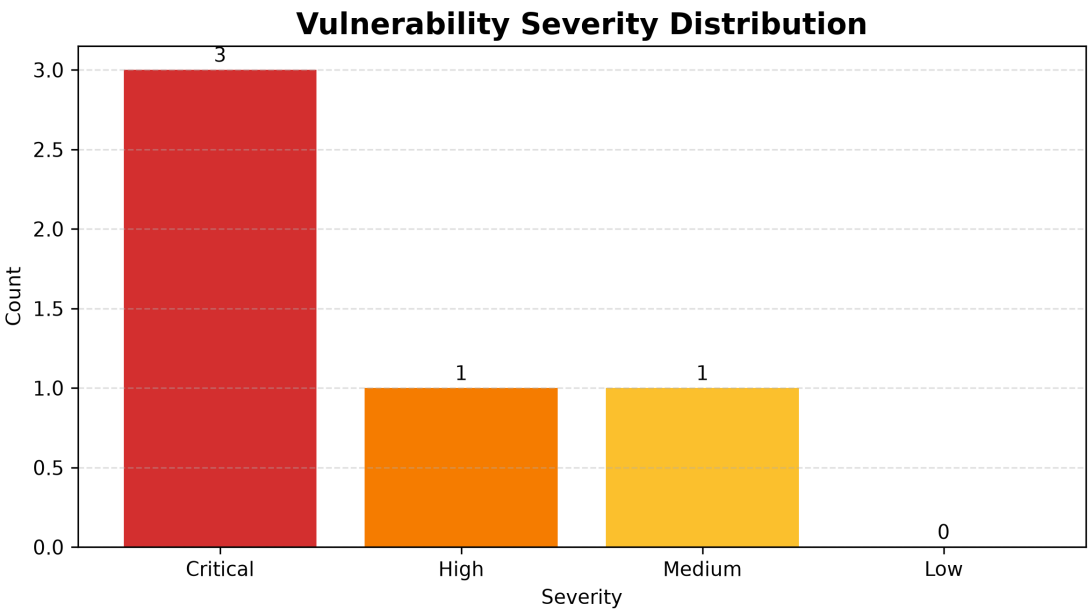

1. Executive Summary
2. Asset Inventory
3. Vulnerability Assessment
4. Relationship Mapping
5. Attack Path Summary
6. Risk Assessment
7. Security Recommendations

Executive Summary

PivotForge analyzed the enterprise environment and generated the following security statistics.

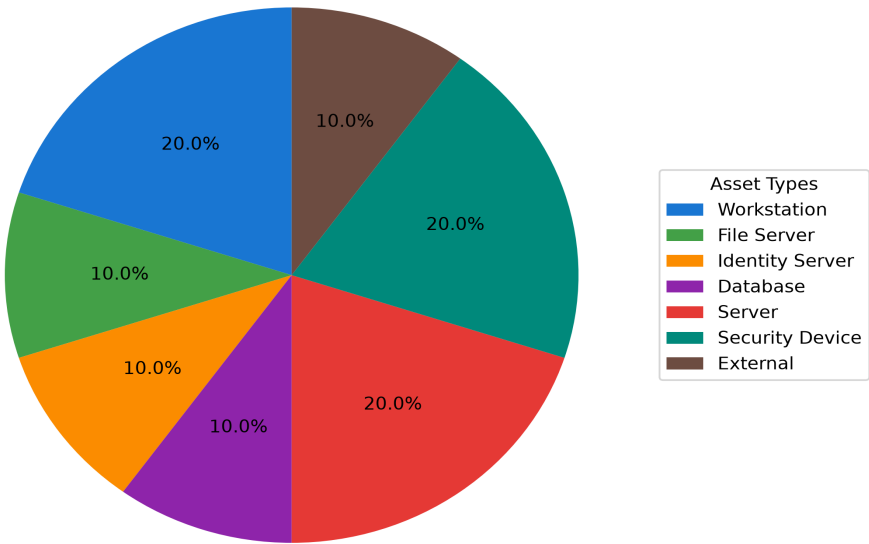

Security Metric	Value
Total Assets	10
Total Vulnerabilities	5
Trust Relationships	10
Attack Graph Nodes	10
Attack Graph Edges	10

Vulnerability Severity Distribution

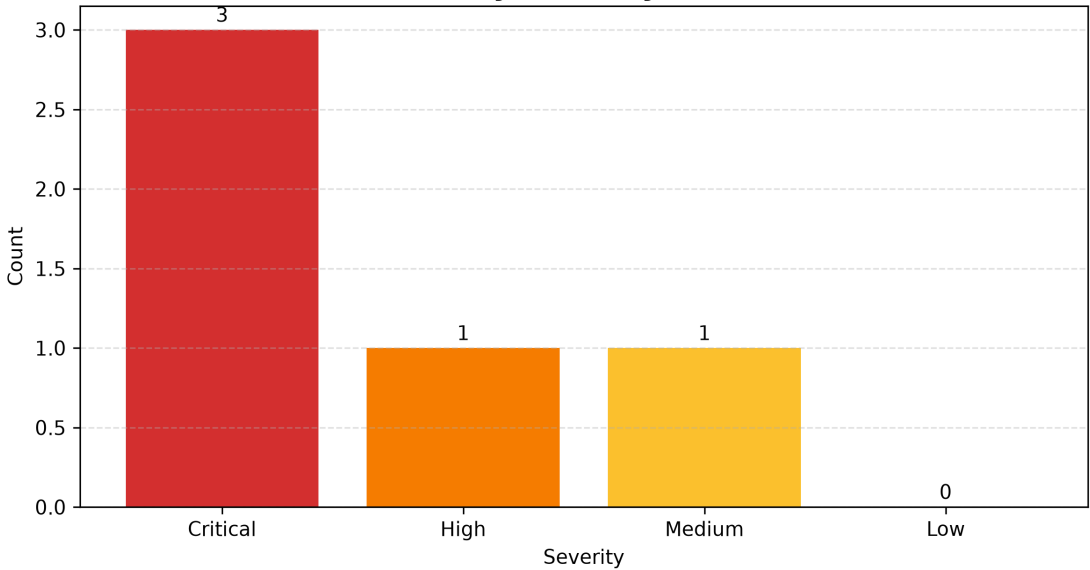

Asset Type Distribution

Enterprise Asset Distribution

Vulnerability Severity Distribution

Vulnerability Severity Distribution

Security Overview

Overall Risk Level : HIGH

This report identifies enterprise assets, vulnerabilities and trust relationships that could allow attackers to move laterally inside the environment.

Asset Inventory

Asset	IP	Type	Criticality
Employee Workstation	192.168.1.70	Workstation	Medium
Administrator Workstation	192.168.1.60	Workstation	High
File Server	192.168.1.50	File Server	Medium
Domain Controller	192.168.1.40	Identity Server	Critical
Database Server	192.168.1.30	Database	Critical
Application Server	192.168.1.20	Server	High
Web Server	192.168.1.10	Server	High
VPN Gateway	192.168.1.2	Security Device	High
Firewall	192.168.1.1	Security Device	High
Internet	0.0.0.0	External	Low

Vulnerability Assessment

Asset	CVE	Severity	Name
Employee Workstation	CVE-2025-1005	Medium	Browser RCE
Domain Controller	CVE-2025-1004	Critical	Kerberos Escalation
Database Server	CVE-2025-1003	High	SQL Injection
VPN Gateway	CVE-2025-1002	Critical	VPN Bypass
Web Server	CVE-2025-1001	Critical	Apache RCE

Relationship Mapping

Source Asset	Destination Asset	Relationship
Employee Workstation	Web Server	Network
Administrator Workstation	Domain Controller	Admin Access
Domain Controller	File Server	Trust
Application Server	Domain Controller	Trust
Application Server	Database Server	Database Connection
Web Server	Application Server	Network
VPN Gateway	Application Server	Trust
Firewall	Web Server	Network
Firewall	VPN Gateway	Network
Internet	Firewall	Network

Attack Path Summary

Metric	Value
Entry Point	Employee Workstation
Target Asset	Internet
Assets in Graph	10
Relationships	10
Estimated Attack Complexity	Medium

This summary provides a high-level overview of the current attack graph. Future versions of PivotForge will calculate optimal attack paths, shortest paths, privilege escalation routes, and risk scores using graph algorithms.

Risk Assessment

Metric	Value
Risk Score	80
Risk Level	CRITICAL
Assets	10
Vulnerabilities	5
Relationships	10

The calculated score represents the estimated overall exposure of the enterprise environment based on the current asset inventory, vulnerability count, and trust relationships.

Security Recommendations

1. • Immediately patch all Critical vulnerabilities.
2. • Review High severity vulnerabilities within 7 days.
3. • Schedule remediation for Medium vulnerabilities.
4. • Enable Multi-Factor Authentication (MFA) for privileged accounts.
5. • Segment critical servers using VLANs or firewalls.
6. • Restrict administrative access using least privilege.
7. • Monitor lateral movement between enterprise assets.
8. • Perform regular vulnerability scanning and attack path analysis.
9. • Keep operating systems and applications updated.
10. • Review firewall rules and remove unnecessary access.
11. • Protect sensitive databases using network segmentation and strong authentication.
